EDUCATION

Delft University of Technology <i>Master in Applied Physics, Track: Energy Materials</i>	Delft, Netherlands Sep 2025 – Present
University of Twente <i>Pre-Master Applied Physics</i>	Enschede, Netherlands 2024 – 2025
University of Twente <i>Bachelor in Electrical Engineering</i>	Enschede, Netherlands 2021 – 2024
• Thesis: <i>Characterization of Electric Double-Layer Capacitors Using Electrochemical Impedance Spectroscopy</i> • Grade: 8.5	

EXPERIENCE

Embedded Software Engineer <i>Royal Pas Reform</i>	May 2025 – Sep 2025 Zeddam, Netherlands
• Maintained and extended a C++ state-machine control box tester on Debian systems, driven by CSV-defined test profiles to verify PLC-controlled hatchery control boxes before deployment. • Implemented automated test sequences including UPS and regional power checks for Canadian-bound systems, enabling verification of market-specific power configurations. • Debugged and maintained the company's Python fork of <i>websockify</i>, improving logging and stabilising remote access for production operators. • Built lightweight, self-contained custom fully from scratch Docker images for MariaDB, Apache/PHP and <i>websockify</i>, served from an internal registry to minimise image size and bandwidth to remote hatchery machines. • Investigated intermittent hardware test warnings by cross-checking IEC 60617 schematics with MOSFET/transistor datasheets and adjusting tester logic, reducing false-positive fault reports.	
Cook <i>Fabels</i>	Dec 2022 – Apr 2025 Enschede, Netherlands
• Owned daily mise en place across all stations in a high-volume bistro kitchen — proteins, sauces, batch components, and service prep — ensuring full readiness before dinner service. • Worked peak dinner services plating 200+ covers per shift, maintaining consistency, timing, and presentation under sustained pressure. • Closed kitchen independently: deep-cleaning stations, inventory checks, and next-day prep readiness.	
Teacher Assistant <i>University of Twente</i>	Sep 2022 – Apr 2023 Enschede, Netherlands
• Supervised and graded lab sessions on amplifier designs using BJTs and MOSFETs. • Supported first-year students with MATLAB and lab equipment.	

TECHNICAL SKILLS

Languages: C++, Python, SQL, MATLAB (Simulink), Mathematica
Developer Tools: Git, SVN, Docker, Apache, Bash, Makefiles, LATEX
Hardware & Simulation: LTSPICE, VHDL, Altium
Fabrication: 3D Printing, Laser Cutting
Software Tools: Autodesk Maya, VTK, VisPY
